RAP as a Service Plus for IT Operations

Overview

RAP as a Service Plus for IT Operations is a proactive service delivered by a Microsoft accredited engineer to diagnose potential issues in your IT Service Management Environment organization with an additional two days onsite focusing on education and remediation planning. It will provide remediation guidelines, best practice and industry standard guidelines addressing identified issues in the areas of people, processes and technology.

What is RAP as a Service Plus?
This is a delivery experience to enable you to assess your environment at your convenience. The data is collected remotely allowing you to maintain privacy and run the assessment on your own schedule. Submission of data through the cloud and viewing results on our online portal uses encryption to help protect your data. This enables you to view your results almost immediately. A Microsoft accredited engineer will review the findings, provide recommendations and plan the two-day follow up onsite visit which will focus on knowledge transfer, and build a remediation plan with your staff and your Technical Account Manager (TAM).

An Online Experience
Data submission to Microsoft online servers and displaying your results on the online portal uses encryption to help protect your data. Your data is analyzed using our RAP expert system. The results remain available throughout the licensed period of your assessment. You can also re-assess your environment at any time using the updated best practice guidance that is made available to subscribers on a regular basis. Your IT staff or other teams within your organization can be granted access to the results in order to collaborate effectively on the outcome of the assessment.

Practical Recommendations
RAP as a Service for IT Operations collects information on the key technology, people, and IT Service Management process areas in your environment and analyzes this information against best practices obtained from over thousands of customer assessments. Solutions for each of the issues are identified and articulated in the Technical Findings report. All critical and important issues are explained by the Microsoft accredited engineer and a remediation plan is provided as one of the key deliverables.
