RAP as a Service for Active Directory Security

The current threat environment requires organizations to align their Identity infrastructure to recommended security practices. RAP as a Service for Active Directory Security is a proactive service delivered by a Microsoft accredited engineer to diagnose potential security issues with your Active Directory environment. It provides an in-depth assessment of your infrastructure to identify vulnerabilities that can lead to Active Directory compromise, including protocols commonly used for propagating Malware within networks, and exposure to Pass the Hash and other Credential Theft Attacks. This service is available for a single Active Directory forest including domain controllers running Windows Server® 2008/R2, Windows Server® 2012/R2, Windows Server® 2016, and Windows Server® 2019.

**Outcomes**

01 **Control**

You control where your data is stored and easily share results with your IT staff and others in your organization.

02 **Expert Results**

All critical and important issues are explained by the Microsoft accredited engineer and a remediation plan is provided as one of the key deliverables.

03 **Action Plan**

Our Microsoft accredited engineers review the RAP findings, provide recommendations, and build a remediation plan with you.

**Capabilities**

RAP as a Service for Active Directory Security collects information on the key technology, people, and process areas in your environment and analyzes this information against best practices obtained from over thousands of customer assessments.

**Holistic Recommendations**

Our recommendations are based on expert evaluation of people, process and technology.

**Continuous Improvement**

Use your 1 year subscription to watch your results improve as you act on recommendations and fix issues in your environment.

**Always Current**

Thousands of Microsoft technology experts continually provide updates to our analysis and guidance.
