Overview

RAP as a Service for Windows Desktop is a proactive service delivered by a Microsoft accredited engineer to diagnose potential issues with your client environment. This service is available for clients running Windows 10, Windows 8, Windows 8.1, Windows 7, and Windows Vista. Although there are no limitations to the number of target machines, an engineer can cover up to 40 targets during an assessment. We recommend considering the following when deciding on how many target machines to use for your assessment:

- Physical location of the machines
- Hardware configuration (e.g. Different CPU disk, graphics and baseboard)
- OS configurations (e.g. call center machine, development, testing machine)

What is RAP as a Service?
This is a delivery experience to enable you to assess your environment at your convenience. The data is collected remotely allowing you to maintain the most privacy and run the assessment on your own schedule. Submission of data through the cloud and viewing results on our online portal uses encryption to help protect your data. This enables you to view your results almost immediately. A Microsoft accredited engineer will review the findings, provide recommendations and knowledge transfer, and build a remediation plan with your staff and your Technical Account Manager (TAM).

An Online Experience
Data submission to Microsoft online servers and displaying your results on the online portal uses encryption to help protect your data. Your data is analyzed using our RAP expert system. The results remain available throughout the licensed period of your assessment. You can also re-assess your environment at any time using the updated best practice guidance that is made available to subscribers on a regular basis. Your IT staff or other teams within your organization can be granted access to the results in order to collaborate effectively on the outcome of the assessment.

Practical Recommendations
RAP as a Service for Windows Desktop collects information on the key technology, people, and process areas in your environment and analyzes this information against best practices obtained from over thousands of customer assessments. Solutions for each of the issues are identified and articulated in the Technical Findings report. All critical and important issues are explained by the Microsoft accredited engineer and a remediation plan is provided as one of the key deliverables.
RAP as a Service

The key technology, people, and process areas in your Windows Desktop environment are analyzed against best practices established from over thousands of customer assessments.

Key Focus Areas

- Hardware configuration and settings
- Event logs information
- Operating system information and settings
- Group Policy processing
- Windows system startup
- Virtualization configuration
- Operational Excellence

Follow-on Experience
Persistence is now built-in with this service, allowing you to re-assess your environment multiple times to track progress, get updates to newly released best practice guidance, obtain new online portal features, and interact with an exclusive online community.

Deliverables Include

- Assessment tooling, multiple submissions, and access to an online portal
- Regular updates to best practice guidance and online portal features
- Use of the online portal and tools for one year with an active Microsoft Premier Support contract
- Knowledge transfer of issues found
- Remediation plan
- Technical Findings report
