### Overview
Gain an insight into the health of your Azure AD environment by proactively diagnosing issues and risks, reviewing your results online, and receiving continuous updates to best practice guidance.

Analyze your Azure AD environment against best practices developed by Microsoft technology experts.

Work with a Microsoft engineer to understand your results and develop a plan that limits risk and improves your environment.

### Objectives
1. Gain an expert’s perspective on what issues you should address first.
2. Optimize your environment based on Microsoft best practices to prevent issues before they arise.
3. Establish a baseline so you can track your progress throughout the year.

### Key Takeaways
- Holistic recommendations that enable you to improve your people, process and technology.
- Expert analysis and a prioritized guidance on what to fix first.
- Regular updates to guidance and features.
- In-depth review of findings with subject matter expert.

### Scope
Assess a single Azure Active Directory tenant through both operational interviews and automated data collection.

The assessment assesses risk across a broad range of Azure AD topic areas including identity and access management, governance, security, and operations.

### Methodology
**Setup your assessment**
Prior to working with your Microsoft Engineer, you will setup your assessment and generate your first set of results.

**Expert analysis**
Your Microsoft Engineer will analyze your results, help you understand each issue identified and ensure that you have the right information to fix the issue.

**Persist and improve**
Re-assess your environment on a monthly basis using the latest updates to continually drive improvement throughout the year.

### Agenda
**Welcome call**
Occurs 2-4 weeks before delivery with your Microsoft Engineer and Technical Account Manager.

**Setup and initial results**
You complete the assessment setup and initial result gathering prior to your analysis.

**Engineer led analysis**
Your Microsoft engineer will analyze your results and lead the in-depth review of your findings during a one-day remote meeting in addition to two onsite days.

Your engineer will work with you to develop a prioritized list of recommendations.

**Close out meeting**
Finalize and deliver your results.

**Detailed Scope and Requirements**

**Technical Scope:**
- Operational processes
- Privileged roles and identity management
- Applications
- Conditional Access
- Authentication
- Users and groups
- Component versioning
- Security configuration
- Availability
- Maintenance

**Software Requirements:**
- Windows Server 2016 or Windows Server 2019
- Microsoft .NET Framework 4.6.2+
- Azure AD Preview 2.0.2.27 module
- MSOnline PowerShell module
- Azure RM PowerShell module

**Be proactive across Focus Areas**
- **Availability and Business Continuity:** Maximize your service availability and plan for disaster recovery
- **Change and Configuration Management:** Manage changes to services configuration settings across your environment.
- **Operations and Monitoring:** Manage and perform day-to-day operations within your environment.
- **Performance and Scalability:** Deliver the expected user experience by managing current and future performance and capacity requirements.
- **Security and Compliance:** Protect your services from attack and ensure the integrity and privacy of your data.
- **Upgrade, Migration and Deployment:** Manage product or development lifecycles, migrations between platforms, and deployment of new services into your environment.
